AFF FIRE PROTECTION SPRAY NOZZLES

BETE Fog Nozzle is pleased to announce the introduction of their new AFF series of fire protection spray nozzles. Based on the success with the N spiral nozzles in the fire protection industry, BETE has expanded its product line to now include FM-approved FF Flat Fan spray nozzles.

AFF nozzles are used for water wall fire protection, where water is used as a barrier to shield against radiant heat, harmful gases, and flames to provide protection for personnel and equipment; and for water deluge applications, where the AFF nozzles are used for surface or equipment protection when relying on rundown for protection is needed.

BETE FIRE PROTECTION NOZZLE EXPERIENCE:

Since BETE's inception in 1950, the company has been recognized as an expert in the fire protection industry. Their high-performance nozzles continue to be the premier choice for offshore drilling and production platforms; petroleum storage and transfer stations; LNG tanks; and in a wide variety of industrial and commercial applications.

ENGINEERING EXPERTISE:

BETE's proven success is a result of their ability to find creative solutions to difficult spraying challenges. Applications Engineers apply their years of expertise to recommend a nozzle design to deliver the specific spray performance necessary for your fire protection requirements. BETE's state-of-the-art spray laboratory is designed to provide a wide range of testing capabilities to accommodate emerging industry trends.
