NEW HYDROPULSE NOZZLE - PNEUMATICALLY ACTUATED, LOW FLOW FLAT FAN SPRAY NOZZLES

The new HydroPulse from BETE provides a controlled intermittent liquid spray using only liquid pressure as the force for atomization in addition to a DRIP FREE performance.

Food-grade materials of construction (303SS assembly) are ideal for food based applications as well as corrosive environments and harsh cleaning fluids. The simple and maintenance-friendly design allows for easy disassembly, inspection/cleaning, and reassembly with basic hand tools and can be rebuilt without uninstalling entire assembly. The HydroPulse is perfect for conveyor-based applications in the following industries: food processing, chemical processing, paper, glass, lubrication and coating, bottling, board manufacturing, automotive, and canning.

The HydroPulse provides a uniform flat fan spray pattern with tapered edges for use in applications that need overlapping sprays. The flat fan spray pattern provides spray angles from 0° to 110° with flow rates of 0.003 to 24.7 gpm.

Made in the U.S.A.
