NEW BETE TANK CLEANING MOUNTING ADAPTER

INNOVATIVE NOZZLE ACCESSORY SOLUTIONS DESIGNED FOR EFFECTIVELY CLEANING TANKER TRUCKS & RAILCARS

Traditionally, tank cleaning machines are mounted vertically inside, limiting the direction of the spray pattern from reaching the bulkhead areas where bacteria cultivate. The New **Tank Cleaning Mounting Adapter** positions the tank cleaning machine horizontally to optimize the spray pattern's direction to clean bulkheads repeatedly with 360° spray coverage.

The mounting adapter is compatible with BETE's powerful high-impact **HydroWhirl® Orbitor** tank cleaning machines in 1 ½" NPT and BSP connection sizes. Combining the accessory and nozzle reduces cleaning cycle times by up to 50% in tanker trucks and railcars.

The **Tank Cleaning Mounting Adapter** is made from 316 Stainless Steel, which is FDA-compliant and suitable for food and beverage applications.
